

Ajax home security alarms

Professionally installed and supported by RAC Security

For the better

When it comes to protecting what matters most, quality and reliability matter. That's why RAC Security partners with Ajax, providers of award-winning security solutions trusted in over 170 countries.

Ajax alarms combine advanced technology, sleek European design and dependable performance to deliver a smart, responsive home security experience. Every system is modular, meaning it's built around your home, your lifestyle and your level of protection.

Your Ajax alarm system is designed to be easy to use, however you choose to interact with it. Arm and disarm your system, receive instant notifications, and check your home's security status at any time through the intuitive Ajax smartphone app. For those who prefer a physical option, keypads are also available.

Control panels

Ajax Hub 2 & Hub 2 Plus

The Hub is the control center of your security system, connecting all devices and keeping everything working seamlessly. It constantly monitors your home and alerts you instantly if something isn't right. The hub can be connected to RAC's monitoring center for around-the-clock monitoring by licensed security experts.

Key features

- » Reliable, encrypted communication
- » Rapid alerts and system health monitoring
- » Smart control via the Ajax app
- » Backup power and multiple communication channels for added peace of mind

You can add any combination of the following to your hub to suit your home, budget and lifestyle.

Intrusion protection

Motion detectors

Designed to detect movement with precision, Ajax motion detectors provide reliable protection while minimising false alarms. They're smart, and can distinguish between pets and people.

Opening detectors

Protect doors and windows with discreet opening detectors that trigger an alert the moment access is attempted. These sensors form your first line of defense, detecting intrusion before someone even enters your home.

Glass break detectors

If a window is smashed, Ajax glass break detectors react instantly. By recognising the specific sound pattern of breaking glass, they provide an extra layer of protection for vulnerable entry points.

Visible Deterrence

Sirens

Loud, highly visible sirens act as both a deterrent and an alert. If an alarm is triggered, sirens immediately draw attention to the situation, discouraging intruders and alerting occupants or neighbours.

Protection beyond break-ins

Fire detectors

Ajax fire detectors monitor for smoke, rapid temperature changes and carbon monoxide (model dependent), providing early warning when it matters most. Integrated into your alarm system, they ensure fast alerts whether you're home or away.

Water leak detectors

Water leak detectors are a smart addition to your alarm system, providing early warning before small leaks turn into costly damage. Discreetly placed in high-risk areas like kitchens, bathrooms and laundries, they alert you the moment water is detected.

Future-proof security solutions

An Ajax system grows with you. We can add devices as your needs change - whether you're securing a new area, renovating, or simply upgrading your protection.

With RAC Security, your Ajax alarm is professionally installed and backed by local support you can trust.
